

DIGIPRISE AUTOMATES KEY PROCESSES AT A LARGE ELECTRONICS MANUFACTURING SERVICES COMPANY

Client Profile

Founded in 1977, the client is the world's largest electronics manufacturing services (EMS) company offering a full range of integrated supply-chain solutions for the world's leading electronics original equipment manufacturers (OEM).

Problem Statement

The client has a global presence with offices in multiple locations. They have a huge asset base which is distributed across various sites. In the absence of a centralized tracking system, they realized that they were making non-optimal investment in purchasing equipments, systems and software licenses.

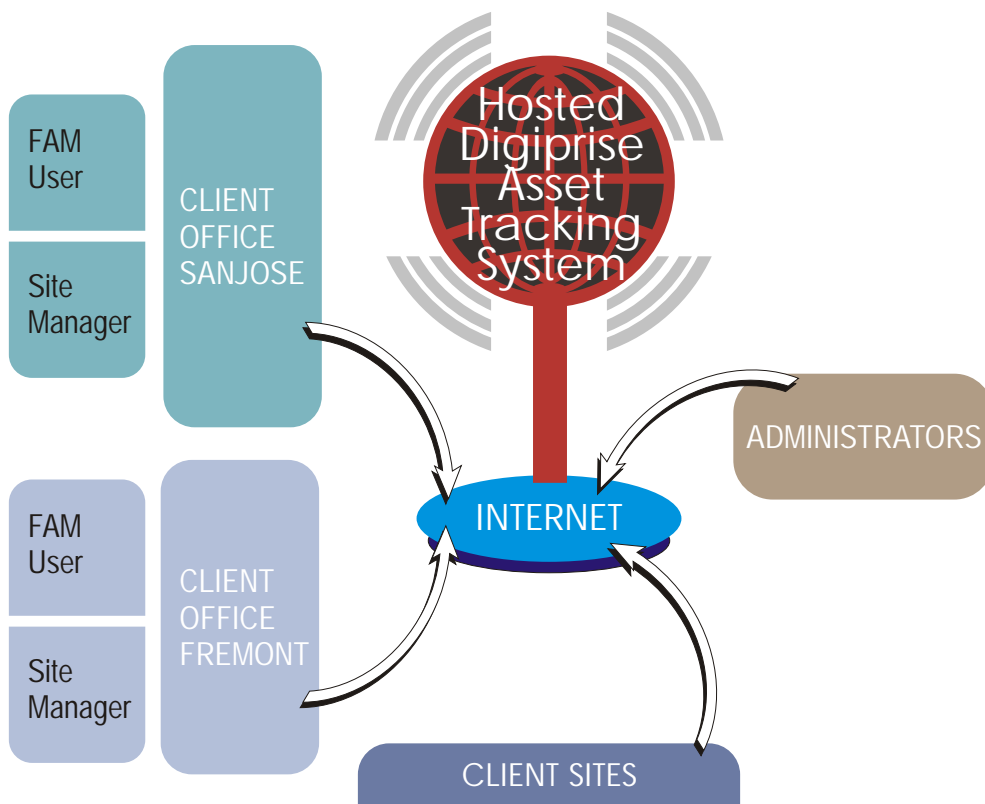

Application Definition

On analyzing it was observed that a centralized tracking system is a critical requirement to keep track of usage of assets at various sites. The client is interested in keeping track of its various IT assets that are purchased and used across its offices all over the globe. Digiprise Asset Tracking functionality which provides a web based solution to keep track of the assets is to be customized and should also ensure that the decision makers get appropriate reports on asset usage at right times.

Application Scope

Digiprise Asset Tracking functionality which provides a web based solution to keep track of the assets with a centralized database is to be offered as a hosted application.

Architecture

Application Benefits

- ▶ The client could evaluate purchase requirements with adequate information on hand and contain the redundant investments. This has resulted in reduced costs.
- ▶ The client could keep track of IT Assets to enable faster and better audits.
- ▶ The solution helped the client in their decision making process in purchasing assets, hardware as well as licenses.
